ADVANTAGES

WHEN YOU CHOOSE CLOUDAMAZE EMAIL SERVICE

You'll always love using our email service. Our features are so great and feature rich that no one in the industry can compete. Down here are the advantages that you can get when using our service.

1. **Fully Free (Swatrantra) software based**

We are a free software based company and are compatible with IT policy of Kerala government.

2. **Three great webmail to choose from**

You have the freedom to choose from 3 great webmail clients that are used by organizations worldwide - Roundcube, Horde, and Squirrelmail.

3. **Customized to your firm**

The webmail will have your logo and names in the interfaces reflecting that the email service is a personalized system.

4. **Servers run by Debian GNU/Linux, most powerful and stable Operating system.**

GNU/Linux systems are renowned for their stability and powerfulness. They also are the most suited for servers. Our servers can provide you robustness and security that you can rely on.

5. **Control panel to individual users**

Each user can manage his personal details.

6. **Ability to integrate with Android, iPhone, Blackberry, Windows Phone, Bada & Symbian.**

You need not wait to get a system that can be used to access your organization email.

7. **Works with Mozilla Thunderbird, MS Outlook, etc.**

Easy to access on desktop systems without opening a web browser.

8. **Fully encrypted connection (End to End Encryption)**

Emails from and to the server is completely encrypted.

9. **SSL Security**

Free installation of SSL certificate with 256bit encryption.

10. **Vacation Response**

User can set a vacation responder that will respond on user's absence.

11. E-Mail Forward

Emails that come to mail boxes can be forwarded easily using our control panel by each user.

12. Cloud based Architecture with 99.99% uptime

Distributed and scalable architecture will provide great uptime.

13. Unlimited Mails

No restriction (Freedom) – Each user can send unlimited emails per day without any restriction.

14. Reports and analytics

You can access analytics and usage reports that can be used to know the history of users and email delivery.

15. Instant Messaging integration

We can setup an XMPP Chat facility that will allow your email users to do cross compatible chats with Google chat, Jabber, etc.

16. Full Mail archiving

All your email are under the archive so that they are arranged in folders and can be easily accessed.

17. Mobile Friendly

The webmail clients are mobile phone friendly that even if your cellphone is not a smartphone, emails can be read.

18. Groupware services

Services like address book, task management and calendar can be integrated to each user.

19. Fully standard based

We don't use any proprietary protocols to lock you in. Also it is compatible with most of the software.

20. No Vendor lock-in

The email service can be ported to any vendor if necessary without losing emails and user data.

21. SMTP, IMAP, POP3 support

These standard email access and transfer protocols will allow you to roam free on any devices & platforms.
